A. Wolecule type: genomic RNA
A. Residues: 2650-2707 < KA2>
A. Experimental source: Japanese isolate
C. Comment: The cleavage sites of this polyprotein have not been determined.
C. Superfamily: hepatitis C virus genome polyprotein
C. Superfamily: hepatitis C virus genome polyprotein
C. Superfamily: hepatitis C virus genome polyprotein
F. 2. 115/Product: capsid protein C * status predicted < CPC>
F. 115-119/Product: major envelope protein E * status predicted < MEE>
F. 390-729/Product: mostructural protein NS1 * status predicted < NS1>
F. 130-1006/Product: hepaclivin * status predicted < NS2>
F. 1230-1237/Region: nucleotide-binding motif A (P-loop)
F. 1317/Region: nucleotide-binding motif B (P-loop)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A; Molecule type: genomic RNA

Genome polyprotein [Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein El (GP23) (GP35); Envelope glycoprotein E2
(GP68) (GP70) (NS1); Protein P7; Nonstructural protein NS2 (P21)
(EC 3.4.22.-); Protease/helicase NS3 (P70) (Hepacivirin)
(EC 3.4.21.98); Nonstructural protein NS4A (P4); Nonstructural protein
NS4B (P27); Nonstructural protein NS5A (P56); Nonstructural protein
NS5B (P66) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)}.
Hepatitis C virus (isolate I) (HCV).
Viruses; SSRNA positive-strand viruses, no DNA stage; Flaviviridae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -!- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polygrotein, commonly with Asp or Glu in the P6 position. Cys or Thr in P1 and Ser or Ala in P1'.
-!- SUBDUIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN CAND MENA.
                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE-91172826; PubMed=1848704;

-!- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -!- SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S29.

--- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in P1 and Ser or Ala in P1'.
---- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPORNOTEIN BAND GLYCOPROTEIN E. THE ENVELOPE CONSISTS OF TWO PROPERNS: PROTEIN MAND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -1- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ohkoshi S., Shimotohno K.; "Molecular structure of the Japanese hepatitis C viral genome."; FEBS Lett. 280:325-328(1991).

Genome polyprotein [Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein El (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GP70) (NSI); Protein P7; Nonstructural protein NS2 (P21)
(EC 3 4.22.-); Protease/helicase AS3 (P70) (Hepacivirin)
(EC 3.4.21.98); Nonstructural protein NSA (P4); Nonstructural protein
NSAB (P27); Nonstructural protein NSA (P56); Nonstructural protein
NSAB (P60) (RNA-directed RNA Pollymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate Taiwan) (HCV).
                                                             CELLULAR AMINOPEPTIDASE.
CAPSID PROTEIN C (POTENTIAL).
MATRIX PROTEIN (POTENTIAL).
MAJOR ENVELOPE PROTEIN E (POTENTIAL).
NONSTRUCTURAL PROTEIN NSI (POTENTIAL).
NON STRUCTURAL PROTEIN NS2 (POTENTIAL).
         Polyprotein; Glycoprotein; Transferase; RNA-directed RNA polymerase; Core protein; Coat protein; Envelope protein; Helicase; ATP-binding; Transmembrane; Nonstructural protein; Hydrolase; Serine protease. INIT_MET 1 REMOVED FROM CAPSID PROTEIN C BY THE
                                                                                                                                          PROTEASE/HELICASE NS3 (POTENTIAL).
NONSTRUCTURAL PROTEIN NS4A (POTENTIAL).
NONSTRUCTURAL PROTEIN NS4B (POTENTIAL).

CELLULAR AMNOPEPTIDASE.

MATRIX PROTEIN (POTEWITAL).

MAJOR ENVELOPE PROTEIN E (POTEMITAL).

NONSTRUCTURAL PROTEIN NS1/E2 (POTEMITAL).

PONSTRUCTURAL PROTEIN NS2 (POTEMITAL).

PROTEASE/HELLCASE NS3 (POTÉMITAL).
         mapping the 5' termini of viral genomic and antigenomic RNA.", Virology 188:102-13(1992).

-!- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

-!- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thi in P1 and Ser or Ala in P1.

-!- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEGCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:
PROTEIN MAND GLYCOPROTEIN E. THE NUCLEGCAPSID IS A COMPLEX OF PROTEIN CAND MRNA.

Machida A., Miyakawa Y., Mayumi M.;

"Nucleotide sequence of the genomic RNA of hepatitis C virus isolated from a human carrier: comparison with reported isolates for conserved and divergent regions.";

J. Gen. Virol. 72:2697-2704(1991).

J. Gen. Virol. 72:2697-2704(1991).

L. FUNKTION: THE SMALL PROFEING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

C. CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in Pl and Ser or Ala in Pl'.

C. SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLECOAPSID IS A COMPLEX OF PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                POLG HVVJ6 STANDARD; PRT; 3033 AA.

                                                                                                                                                                                                            SUDMITTED (JUN-1996) to the EMBL/GenBank/DDBJ databases.

-!-FUNCTION: COMMON JUNCTIONAL PLAQUE PROTEIN. THE MEMBRANE-
ASSOCIATED PLAQUES ARE ARCHITECTURAL ELEMENTS IN AN IMPORTANT
STRAPEGIC POSITION TO INFLUENCE THE ARRANGEMENT AND FUNCTION
OF BOTH THE CYTOSKELETON AND THE CELLS WITHIN THE TISSUE. THE
PRESENCE OF PLANGGLOBIN IN BOTH THE DESNOSMES AND IN THE
INTERMEDIATE JUNCTIONS SUGGESTS THAT IT PLAYS A CENTRAL ROLE IN
THE STRUCTURE AND FUNCTION OF SUBMEMBRANOUS PLAQUES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-JUL-1993 (Rel. 26, Created)

Natl. Acad. Sci. U.S.A. 86:4077-4031(1989).

1- FUNCTION: COMMON JUNCTIONAL PLAQUE PROTEIN. THE MEMBRANE-ASSOCIATED PLAQUES ARE ARCHITECTURAL ELEMENTS IN AN IMPORTANT STRATEGIC POSITION TO INFLUENCE THE ARRANGEMENT AND FUNCTION OF BOTH THE CYTOSKELETON AND THE CELLS WITHIN THE TISSUE. THE PRESENCE OF PLAKOGLOBIN IN BOTH THE DESMOSOMES AND IN THE INTERMEDIATE JUNCTIONS SUGGESTS THAT IT PLAYS A CENTRAL ROLE IN THE STRUCTURE AND FUNCTION OF SUBMEMBRANOUS PLAYS A CENTRAL ROLE IN THE STRUCTURE AND FUNCTION OF SUBMEMBRANOUS PLAQUES.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

        Peptides AAR70080-3 were pre-incubated with JY-EBV cells in an assay to detect the cytotoxic activity of cytotoxic T cells (CTL), that were challenged with hepatitis B virus (HBV) polymerase (HBpOl) epitopes e.g. the peptides GESRYVARL or SGLSRYVARL, to the pre-incubated cells. The peptide presented here is a hepatitis type C virus fragment. The HBpOl epitope peptides (see AAR70044-59) can be used, prophylactically as vaccines, together with, or conjugated to, HBV helper epitopes (AAR70060-4). The peptides can be used, particularly ax vivo, co stimulate CTL cells, which cells can be reintroduced into patients who have chronic or acute HBV infections or are carriers, especially in treatments to prevent conversion from acute to chronic infections.
                                                                                                                                                                                                                                       ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAR84570-616, AAR84885-90 and AAR91054 are all HCV-1 derived peptides from the core, El. E2/NS1, NS2, NS3, NS4 or NS5 regions. The peptides were tested for peptide specific cytotoxic T-cell activity. The peptides AAR84570-77 were found to have substantial homology with a T-cell epitope and are useful in vaccines against HCV infection.

                                                                                                                                                                                                         imunogenic T-cell peptide epitopes present in polypeptide antigens. The immunogenic T-cell peptide epitopes present in polypeptide antigens. The method involves the identification of peptide sequences capable of binding to an HLA (human leukocyte antigen) class I molecule and measuring the binding of this epitope peptide to the HLA class I peptide. The stability of binding of the peptide and MHC (major historompatablily complex) class I molecule is measured on intact human B cells carrying the MHC molecule at their cell surfaces. The method can be used to select peptide epitopes for generating vaccines against a disease associated with the polypeptide, e.g. cancers or AIDS. The peptide epitopes are sepecially T-cell peptide epitopes with strong anti-tumour and anti-viral immune responses. Peptide ased to determine conserved hepatitis C virus type I NS3 derived peptide used to determine the stability of HLA-A*0201 complexed with known CTL lymphocytes.

The peptides AAW54559-W54809 are examples of peptides to which at least 1 (preferably 2) mannose can be attached to increase their uptake as antigens by antigen. Presenting cells. Uptake of agonist mannosylated peptides will increase the T cell response, whereas uptake of antagonist peptides blocks the T cell response. Blocking binding of immunogenic autoantigens can be used in treatment of type I diabetes, rheumatoid arthritis, graft rejection etc., also to induce T-cell non-responsiveness. Vaccines containing mannosylated antigen are used to prevent or treat infections by, e.g. bacteria, viruses, fungi, helminths
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method of inducing and/or sustaining an immunological cytotoxic T lymphocyte (CTL) response in a mammal. The method comprises: (a) delivering an antigen to the mammal at a level to

                                                                          an embryonic antigen, an oncogene antigen, a mutated tumour-Suppressor gene antigen, or a viral antigen. They can be used for the treatment of disease such as cancer, e.g. malignant melanoma or infectious disease, e.g. viral disease such as hepatitis or AIDS. Sustained antigen delivery to the lymphatic system provides for potent CTL stimulation that takes place in the miltau of the lymphoid organ, and it sustains stimulation that is necessary to keep CTL active, cytotoxic and recirculating through the body. AAY10071 to AAX10639 represent examples of peptide antigens given in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a method of inducing and/or sustaining an immunological cytotoxic T lymphocyte (CTL) response in a mammal. The method comprises: (a) delivering an antigen to the mammal at a level to induce an immunological CTL response in the mammal; and (b) maintaining the level of the antigen in the mammal's lymphatic system to maintain the immunologic CTL response. The method can be used for the delivery of e.g. a differentiation antigen, a tumour-specific multilineage antigen, an embryonic antigen, an oncogene antigen, a mutated tumour-suppressor gene antigen, or a viral antigen. They can be used for the treatment of
Induce an immunological CTL response in the mammal, and (b) maintaining the level of the antigen in the mammal's lymphatic system to maintain the immunologic CTL response. The method can be used for the delivery of e.g. a differentiation antigen, a tumour-specific multilineage antigen,
                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Inducing a cytotoxic T lymphocyte response - by maintaining a level of antigen in the lymphatic system of a mammal so as to provide a sustained CTL response, used to treat, e.g. AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cytotoxic T-lymphocyte response; CTL; antigen; lymphatic system; immunisation; tumour; infectious disease; immunotherapy; cancer; malignant melanoma; viral disease; hepatitis; AIDS.

disease such as cancer, e.g. malignant melanoma or infectious disease, e.g. viral disease such as hepatitis or ADDS. Sustained antigen delivery to the lymphatic system provides for potent CTL stimulation that takes place in the milieu of the lymphoid organ, and it sustains stimulation that is necessary to keep CTL active, cytotoxic and rechrculating through the body. AAY10071 to AAX1063 represent examples of peptide antigens given in the present invention.
                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                            AAR69523-R69545 are anti-hepatitis C virus (HCV) antibody immunoreactive peptides, based on the PepB (AAR69529) or the PepC (AAR69534) sequences. These peptides, in linear or branched dimer compsns. are used in immunoassays for the detection of HCV infections, the peptide compsns. may also be useful in vaccines against these infections.

These peptides, in linear or branched dimer compsns. are used in immunoassays for the detection of HCV infections, the peptide compsns. may also be useful in vaccines against these infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAR69523-R69545 are anti-hepatitis C virus (HCV) antibody immunoreactive peptides, based on the PepB (AAR69529) or the PepC (AAR69534) sequences. The HCV NS-3 region peptide is highly immunoreactive with HCV antibodies and can provide highly sensitive and specific assays for diagnosis and monitoring. It can also be used for prevention/treatment of non-A non-B hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Hepatitis C virus; HCV; non-A non-B; antibodies; vaccines; immunoreactive peptide; PepB; Cl3; infection detection assay.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The HCV NS-3 region peptide is highly immunoreactive with HCV antibodies and can provide highly sensitive and specific assays for diagnosis and monitoring. It can also be used for prevention/reatment of non-8 hepatitis.

Sequence 16, Application US/08083947

Patent No. 5639594

GENERAL INFORMATION: Wang Yi

APPLICANT: Wang, Chang Yi

APPLICANT: Hosein, Barbara

TITLE OF INVENTION: No. 5639594el Linear and Branched Peptides Effective

TITLE OF INVENTION: In Diagnosing and Detecting No. 5639594-B, No. 5639594-B Hepat

NUMBER OF SEQUENCES: 23

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Sequence 18, Application US/08083947
Patent No. 5639594
GENERAL INFORMATION:
APPLICANT: Wang, Chang Yi
APPLICANT: Hosein, Barbara
TITLE OF INVENTION: No. 5639594e1 Linear and Branched Peptides Effective
TITLE OF INVENTION: in Diagnosing and Detecting No. 5639594-B He
NUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ŏ
                                                                                                                                                                                                                                                                                A. Experimental source: isolates E-b17
C. Superfamily: hepatitis C virus genome polyprotein
F. Hepatitis C apsid protein C #status predicted <CPC>
F. 115. Product: capsid protein C #status predicted <CPC>
F. 116. 191. Product: envelope protein M #status predicted <MEE>
F. 192. 389. Product: major envelope protein B #status predicted <NS1>
F. 130. 1006/Product: nonstructural protein NS1 #status predicted <NS2>
F. 130. 1237/Region: nucleotide-binding motif A (P-loop)
F. 1315-1317/Region: DEXH motif
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     genome polyprotein - hepatitis C virus (strain H)
N'Contains: capsid protein C; envelope protein M; hepacivirin (EC 3.4.21.98) (nonstructur)
N'Contains: capsid protein C; envelope protein M; hepacivirin (EC 3.4.21.98) (nonstructur)
Protein NS4s; nonstructural protein NS4b; nonstructural protein NS5
C; Species: hepatitis C virus
A; Note: host Homo sapiens (man)
C; Date: 31-Dec-1992 #sequence_revision 31-Dec-1992 #text_change 19-Jan-2001
C; Accession: A36814; A41546
R; Inchauspe, G.; Zebedee, S.; Lee, D.H.; Sugitani, M.; Nasoff, M.; Prince, A.M.
A; Description: Genomic structure of the human prototype strain H of hepatitis C virus: C
A; Accession: A36814
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A Note: neither amino acid nor nucleotide sequence is given
C Superfamily: hepatitis C virus genome polyprotein
F 115/Product: capsid protein C #status predicted <CPC>
F 116-191/Product: capsid protein C #status predicted <CPC>
F 116-191/Product: envelope protein E #status predicted <MEE>
F 130-1006/Product: nonstructural protein NS2 #status predicted <NS1>
F 130-1006/Product: nonstructural protein NS2 #status predicted <NS2>
F 1230-1237/Region: nucleotide-binding motif A (P-loop)
F 1312-1317/Region: DEXH motif
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    F;1616-1862/Product: nonstructural protein NS4a #status predicted <N4A>
F;1863-2013/Product: nonstructural protein NS4b #status predicted <N4B>
